SUMMARY

Full-stack software engineer with 1+ year of experience developing scalable web applications across the frontend and backend. I focus on clean code, solid database design, and building maintainable systems that perform well in production.

WORK EXPERIENCE

Software Engineer2024 - Present

Hipe Japan Inc.

Suggested Keyword

- Built REST API endpoints using Express to fetch Japan-based autocomplete keywords.
- Mapped autocomplete results to determine suggested keyword status.
- Developed batch workflows to reprocess historical keywords and keep data up to date.
- Designed relational database structures for keyword storage and efficient querying.

Tech Stack: Express, REST API, MySQL

Hybrid CMS

- Developed AI-powered features using FastAPI, integrating OpenAI to generate SEO strategies and persona-based content from Perplexity.
- Enhanced an existing CMS by integrating frontend features with Hybrid CMS endpoints, enabling automated generation and storage of AI-driven website content.

Tech Stack: Python, FastAPI, CakePhp, MySQL

PERSONAL PROJECTS

DevKit

- Built productivity and optimization tools for text and structured data, improving developer workflows and frontend efficiency.
- Focused on design accuracy, responsiveness, accessibility, and utilities for debugging, security, and playground environments.

Tech Stack: NextJS
